- Control surfaces can be fixed
- Control surfaces are affected by wind if pilot left aircraft and controls have not fixed..
- Avionics may be damaged if avionics master switch is not turned off during engine start and engine shut down..
- Propeller can be damaged by ground contact
- Exterior equipment like brake chocks, warning cones, camping equipment, tools, information panel for flight days etc.

The Dornier Do-27 Digital Aviation Do-27 (FSX+FS2004) Soyez Many of those who came in contact with the Dornier Do-27 could hardly take their hands off it.

Over 5000 lines of code have been written only for the animations! Today, flight simulation pilots can be divided in two groups.. There also two initiation modes that override the automatic detection system: `cold&dark` and `taxi`.. This very special replica comes in 2 variants (A1, B1) and 6 aircrafts that are different in equipment, panels, exhausts, tires, lighting etc.. In `Simple` mode, this aircraft can be flown just for fun and recreation In `Pro` mode you always have to keep an eye on all the systems of the aircraft..

- Elevator vibrates during engine start and at low rpm on ground
- All doors can be handled separately (that means lock/unlock, open/close and dumping)
- The 2 engine doors can be opened separately as well as the whole lower cowling.

Alpine Many of those who came in contact with the Dornier Do-27 could hardly take their hands off it.. **BIG FEATURE LIST:**

Exterior Model:

- All standard animations like control surfaces, cowl flap, elevator trim, wheels etc.. It is an exciting challenge because operating errors will have consequences Flight time will be logged in this mode only and the pilot is rewarded with certificates.. This add-on for Microsoft Flight Simulator X is quite different compared to the other add-on aircraft you might have experienced.. The kneeboard provides information and controls for different elements of the airplane, for example the maintenance mode.

This is the the perfect aircraft to buy and fly when you want to take a break from your stock-standard FSX Cessna, Boeing or Airbus aircraft.. The first group is trying to simulate flights so that it is as real as it gets, and other uses fly for recreational purposes and mostly do short flights in their spare time.. Besides the extraordinary visual model this add-on is equipped with features that have never seen before in FS..

- Attitude indicator and compass card are driven electrically and have to be aligned / calibrated.. It is also possible to let your plane be automatically configured for 3 different operating conditions in realtime (that means, you can see the switches and levers moving while your invisible assistant prepares the aircraft) whenever you want: Prepare for engine start! Make her ready to fly! Shut off and power down.. Additionally after changing your aircraft to the Do-27, the plane tries to interpret the actual situation and will configure itself. e10c415e6f
